## **The search conference method - Elements UK**

In computer science, Monte Carlo tree search (MCTS) is a heuristic search algorithm for some kinds of decision processes, most notably those employed in game play. The leading examples of Monte Carlo tree search are recent computer Go programs, followed by chess and shogi, as well as real-time video games (such as Total War: Rome II's implementation in the high level campaign AI) and games with ...

Monte Carlo methods have been developed into a technique called Monte-Carlo tree search that is useful for searching for the best move in a game. Possible moves are organized in a search tree and a large number of random simulations are used to estimate the long-term potential of each move. A black box simulator represents the opponent's moves.
